BRANDING OPTIONS

PAD PRINTING

This application is done using a silicone pad. It functions as a transfer vehicle, picking up ink from the printing plate, and pressing it directly onto the product.

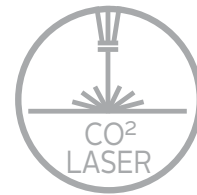

SCREEN PRINTING

Screen printing is a printing technique whereby a mesh screen is used to transfer ink onto a substrate. This is the most common method of imprinting on promotional items and apparel.

EMBROIDERY

Embroidery is stitched with a computerised embroidery machine using patterns digitised with embroidery software. Artwork must first be digitised, which is the specialised process of converting two-dimensional artwork into stitches.

LASER ENGRAVING

This method is achieved by burning the top layer of the substrate with a thin laser beam that cuts through the product creating a lasting detailed logo.

DIRECT TO DIGITAL

Digital printing is a method whereby the image is printed directly onto the product. This application provides you with a full colour printing option.

DEBOSSING

This process involves creating a die in the shape of a logo that is pressed into the surface creating a permanent sunken design.

DIGITAL STICKER

Digitally printed directly onto a vinyl adhesive substrate that can be affixed to a product. This application provides you with a full colour printing option.

YAG LASER

This process is achieved by a solid-state laser that engraves the logo from metal surfaces, giving you a detailed subtle logo.

BXD

It is the evolution of embroidery that encompasses the Vibrancy, Clarity and High Definition of print, all encapsulated in one single embellishment. It is so versatile that it can be applied to any garment or promotional gift with the same homogeneous uniform look.

HEAT PRESS

Heat press is imprinting a design or graphic onto a substrate, with the application of heat and pressure for a pre-set period of time.

SUBLIMATION

Dye Sublimation is digitally printed on a coated paper and then transferred to the substrate.

DOME

Digitally printed directly onto a vinyl adhesive substrate that can be cut into a variety of shapes and sizes. The stickers are then coated with a polyurethane to give a dome-like appearance creating a 3D effect.
