SWITCH YOUR BRAND ON

This application is done using a silicone pad. It functions as a transfer vehicle, picking up ink from the printing plate and pressing it directly onto the product.

Screen printing is a printing technique whereby a mesh screen is used to transfer ink onto a substrate. This is the most common method of imprinting on promotional items and apparel.

Embroidery is stitched with a computerised embroidery machine using patterns digitised with embroidery software.

Digital printing is a method whereby the image is printed directly onto the product. This application provides you with a full colour printing option.

This method is achieved by burning the top layer of the substrate with a thin laser beam that cuts through the product creating a lasting detailed logo.

This process involves creating a die in the shape of a logo that is pressed into the surface creating a permanent sunken design.

Digitally printed directly onto a vinyl adhesive substrate that can be affixed to a product. This application provides you with a full colour printing option.

Digitally printed directly onto a vinyl adhesive substrate that can be cut into a variety of shapes and sizes. The stickers are then coated with a polyurethane to give a dome-like appearance creating a 3D effect.

This process is achieved by a solid-state laser that engraves the logo from metal surfaces, giving you a detailed subtle logo.

Dye Sublimation is digitally printed on a coated paper and then transferred to

It is the evolution of embroidery that encompasses the Vibrancy, Clarity and High Definition of print, all encapsulated in one single embellishment.

Heat press is imprinting a design or graphic onto a substrate, with the application of heat and pressure for a preset period of time.

Because we take pride in our brand, we take pride in yours. Our dedication to high quality and ever-expanding embroidery and printing solutions guarantee that we have the right solution for your brand. No matter the product, we can brand it.
